

# NASH CASH

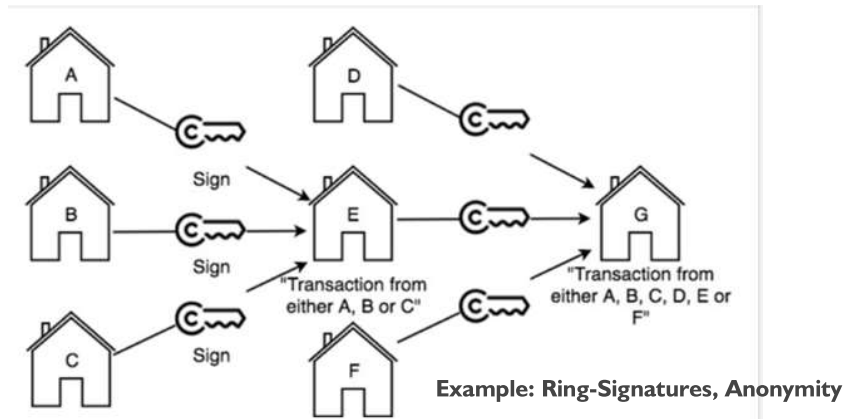

## WHITEPAPER

2019-02-10

For a long Time, we have been investigating the Development of various Cryptocurrencies. We have found some disadvantages. For Example Bitcoin: For a reasonable Payment System the Transfer takes too long, due to the Blocktime. The Anonymity is not given. Also, Bitcoin is not a decentralized Currency. Mining Monopolies and Pool Monopolies are mentioned here. It was followed by many Alternatives that were either pure Shitcoins or the Projects were abandoned. We found the gap, a Payment System that summarizes Anonymity, Security and Speed. We developed NashCash, we try to circumvent the Deficits of other Currencies and to establish Nashcash to a functioning, recognized Payment System.

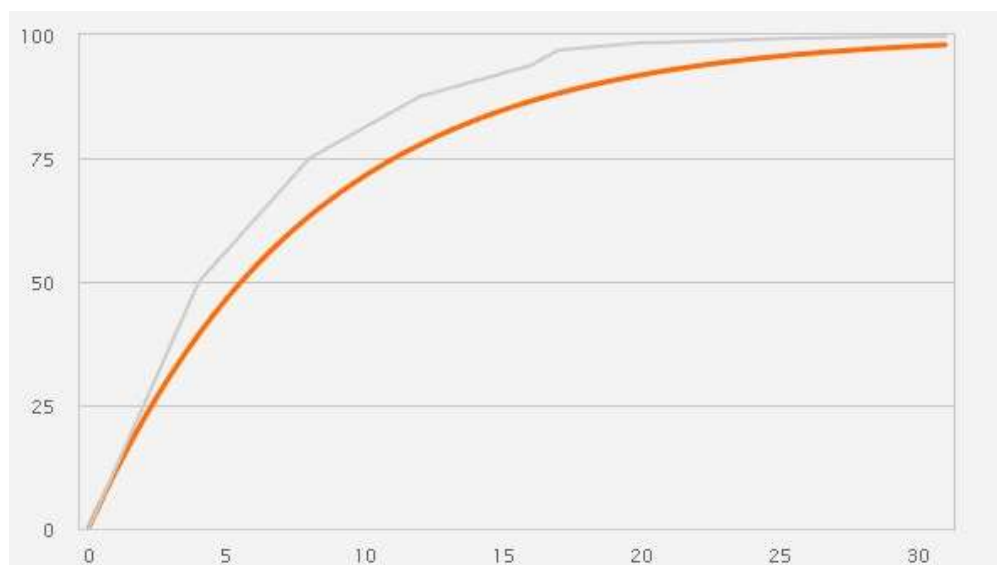

We choosed the Cryptonote Technology because it offers true Anonymity, unlike Bitcoin, Ethereum, Litecoin and others. If you watch the Block Explorer, you´ll find no Conclusions on Sender or Receiver, or Transfer Height. Also, the individual Accounts are not publicly readable, or the Number of coins on it. Also unlike Bitcoin, there are no fixed Blocksizes, no Halving, no Difficulty Adjustments. Blocksize and Difficulty scales with each Block.

We favor cryptonight lite v1 to exclude ASIC Farms from mining. Mining should protect the Network externally, preserve the validity of the Blockchain and not support profit-hungry People. Mining, after the Emergence of ASICs developed neither decentralized, nor were the Miners paid in the end Profitably. Mining should be rewarded to those who are interested and fun.

We ran Premining to Test the Blockchain before release. These Tests were completed one month before Publication. We have thereby searched for Errors, the few that occurred, we have fixed, so that the Start can be smoothly and without Errors. It were Errors in the Payoutprocess and the Poolsoftware. There may still be Inconsistencies in the blockchain, but this will not lead to any loss, it´s just the nature of Cryptonote.

Through a slow and smooth Growth (after 5 Years, about 50% of the Coins are mined) we want to ensure that the Market is not flooded. The Emission is similar to bitcoin, but can be changed in Contrast to Bitcoin. In total, there will be 48,000,000 Coins.

— NashCash      — Bitcoin

**In the Future, we will further develop the System as far as that it can be integrated gapless into everyday life. That means payment with the Advantage of Anonymity. Further, the Proof of work code will be rewritten into a Hybrid Code, so that Proof of stake is possible.establish Nashcash to a functioning, recognized Payment System.**

**Social media is an important Part of the present Time. We are present and looking for you to support. If we could not convince you now, just watch our Project as it grows. If you are interested and want to participate actively, we are reachable for you. Visit our Website, you will find all Contact Possibilities. You can bring in your Ideas.**

**You`re welcome**
